latexdiff Example - Revised version

F Tilmann

December 27, 2023

Introduction

This is an extremely simple document that showcases some of the latexdiff features.
Type

```
latexdiff -t UNDERLINE example-draft.tex example-rev.tex > example-diff.tex
```

to create the difference file. You can inspect this file directly. Then run either

```
pdflatex example-diff.tex
xpdf example-diff.pdf
```

or

```
latex example-diff.tex
dvips -o example-diff.ps example-diff.dvi
gv example-diff.ps
```

to display the markup.

Yet another section title

More things could be said were it not for the constraints of time and space.

A paragraph with a line only in the revised document. More things could be said were it not for the constraints of time and space.

And here is a typo.

Here is a table:

Name	Description
Gandalf	White
Saruman	Evil

And now for something completely different, with not a paragraph in sight. No change, no markup!
